Video Control Systems CLOSED CIRCUIT TELEVISION

Video security systems that use closed circuit television allow for controlling, observing and filming 24 hours a day. We can provide all necessary material for video security communications, including interior and exterior dome cameras, mini-dome cameras, anti-vandal cameras, camouflaged cameras, recorders, monitors, hard drives, etc. In fact, our company specializes in security systems for all private or business sector situations. Our clients include small companies, jewelers, pharmacies, shops, hotels, residential communities, and many more. Our products help maximize security and prevention.

Examples of a few Key Functions in Security:

- ▣ Continuous recording and/or activating occurrences via alarms, registry at presence/access terminals, movement detection, etc.
- ▣ Control of zones where materials are processed and warehoused.
- ▣ Control of clients in waiting rooms.
- ▣ Control of students in schools, classrooms and outdoor enclosures.
- ▣ Observation of locations where goods or equipment are stored.
- ▣ Activation of cameras when movement is detected in high risk areas.
- ▣ Visualization of visitors via video monitor and "automatic doorman" before allowing access.
- ▣ Dissuades robberies by showing visible control.
- ▣ High quality digital recording of images from any location or angle.
- ▣ Interface with camera and alarm activation sensors after closing.
- ▣ Web visualization with digital video recorder.
- ▣ Video control of general areas or zones subject to specific risks.
- ▣ Transmission of occurrences to review any important activity.
- ▣ 24-hour video control, recording included if desired.
